Warranty (1 year warranty)

We give patients a one-year warranty on all work performed in our office.

The warranty period is counted from the day the work is completed.

The one-year warranty covers:

- fillings / - root canal treatment / - crowns, bridges / - removable dentures

The condition for maintaining the warranty is:

- attending oral examinations and hygiene (removal of tartar and deposits) every 6 months,
- immediate performance of treatments recommended by the doctor during the examination,
- maintaining oral hygiene in accordance with the doctor's recommendations given during oral hygiene instructions,
- after completion of prosthetic treatment, at least one follow-up visit within a month from the end of work, and another one after 3 months.

The warranty does not cover:

- temporary works: crowns, bridges, immediate dentures placed immediately after tooth extraction and requiring relining or replacement;
- wearable retention elements and acrylic elements in "combined" dentures;
- work for which the patient was informed about the limited warranty or lack thereof, and which were performed at the patient's express request;
- when immediately after filling the tooth (1 month) it turns out to be necessary to perform root canal treatment, then the filling is performed under the warranty, while the patient bears the cost of the root canal treatment;
- re-root canal treatment of a tooth previously treated outside our clinic;
- interrupted treatment;

- treatments not paid in full or in part.

The warranty does not cover damage caused by:

- failure to comply with oral hygiene;
- not completing recommended follow-up visits,
- failure to follow the doctor's recommendations regarding the treatment of the prosthetic restoration;
- fractures of dental crowns between visits of teeth undergoing root canal treatment;
- fractures of the dental crowns of teeth after root canal treatment that were not prosthetically restored, when the doctor stated that prosthetic reconstruction is advisable;
- replacing only some of the missing teeth, causing overload of the prosthetically replaced zone;
- corrections of prosthetic fillings made outside the office;
- mechanical injuries (e.g. after accidents);
- natural bone loss and periodontal changes;
- existing disease that has an adverse effect on the masticatory system (e.g. bruxism, diabetes, epilepsy, osteoporosis, post-radiation and cytostatic therapy).
